

ADAS POLICY ABOUT EU REGULATION (EG) No 1907/2006 "REACH"

Fontenay-le-Fleury. 28 July 2011,

We are frequently contacted by our customers regarding REACH regulation.

According to the European REACH regulation, ADAS Electronique is a **Manufacturer of Articles**, a **downstream user** and we are not submitted to registration obligations.

A registration is only required for downstream users who directly import substances produced outside the European Union. This is not the case for ADAS. ADAS manufactures electronic goods which are not subject to release substances in normal conditions.

In order to comply with REACH regulation article 33, we monitor our providers and we will inform you immediately if it happens that one of our products contains **Substance of Very High Concern** (SVHCs) in a concentration of more than 0.1% of its weight.

We will also follow and apply any change in REACH regulation which could affect our products.

Our customers' security is a strong commitment of ADAS Electronique.

ADAS Electronique Management
